

Exclusive stone

Premium-quality stone products for discerning homeowners and prestigious properties

STONE HUB SPECIALISES IN THE SUPPLY OF premium-quality natural stone products for the landscape market. Offering paving, pool coping and wall cladding in a wide array of stone, including bluestone, granite, sandstone and travertine, Stone Hub products are the preferred choice of many leading landscape designers and award-winning landscapers.

By sourcing its stone from select quarries, Stone Hub is able to supply top-grade products at competitive prices. And while it has an extensive range of styles, sizes and profiles, it also offers an affordable custom service with short lead times.

To make its products available to the widest client base, Stone Hub now has an online store stocking a comprehensive selection of standard sizes and finishes in paving, coping, walling and capping. Samples can be sent anywhere in Australia, experienced staff are on call to answer client enquiries, and products can be delivered, at a fixed price, direct to your door in Melbourne or Sydney. Delivery to other areas is available at competitive rates.

With its impressive slip and scratch resistance, Bluestone is one of Stone Hub's most popular products. The company has interests in two bluestone quarries: one producing blue-grey stone, the other offering a darker charcoal colour. All bluestone has minimal "cats-paw" and fissuring, yet just enough to add character.

Stone Hub bluestone is available in a choice of finishes, including standard (where the stone is sawn and very lightly honed to just remove any noticeable saw marks) and honed (where the stone surface has a smoother finish and the colour is darker). Other choices are bush-hammered, flamed, sandblasted, chiselled, split, or brushed.

A new addition to the Stone Hub range is E Pave, a quality engineered stone that has a superior finish compared to other manufactured or re-constituted pavers. Available in a standard 600mm x 600mm format and in six contemporary colours, along with various coping accessories, this product has been several years in development. In line with Stone Hub's other products, E Pave has been introduced to keep up with landscape trends; it's benchmark quality, yet affordably priced.

As part of Stone Hub's commitment to keeping up with landscape trends, their online store (www.stonehub.com.au), through consultation with leading landscape designers, is constantly updated with new products. This includes the recent expansion of their already popular LedgeStone cladding range.
